

AREA OF APPLICATION

- Decentral ventilation system with heat recovery
- As well for new builds as for renovation
- Installation without ducts, so perfect solution for renovation
- Continuous ventilation due to alternating ventilators
 - mechanical supply of fresh air
 - mechanical extraction of polluted air
- Optionally demand-controlled ventilation thanks to integrated air quality sensors
- High-efficiency heat recovery system for energy saving

A+ ➔ 40 dB(A) ➔ 61 m³/h

PRODUCT SPECIFICATIONS

- Unique regenerator [warmth recuperation]
 - Efficiency level: up to 80% [EN13141-8]
 - Regenerator module is heated by the extracted air, the warmth is saved in the regenerator and transferred to the supplied air [whenever the airflows changes direction]
- Alternating ventilation modules
 - The axial fans turn and change the airflow direction in a cyclic way.
- Frost and condensation free
 - The cyclic fans prevent condensation in the regenerator
 - The cyclic fans avoid freezing in the heat recovery system
- Automatic bypass
 - Temporarily no warmth recuperation
 - Based on integrated temperature sensors
 - Guaranteed comfort temperature inside the house
- Modular system
 - The total airflow capacity of the system is variable thanks to the possibility to change the number of the integrated fan modules [min. 2x1 module / max. 2x6 modules]
- Various air supply possibilities [supply upwards or downwards]
- Horizontal [on top of the window profile] or vertical installation [next to the window profile]

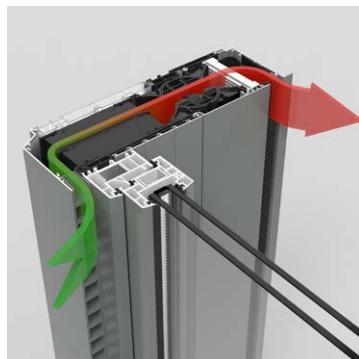

Warmth recuperation

INSTALLATION TYPES

- Available for both **horizontal installation** [on top of the window profile] and **vertical installation** [perfectly combinable with screens/roller shutters]

Endura Twist horizontally

Endura Twist vertically

- Various air supply possibilities and finishes on the inside

HORIZONTAL

Air supply downwards

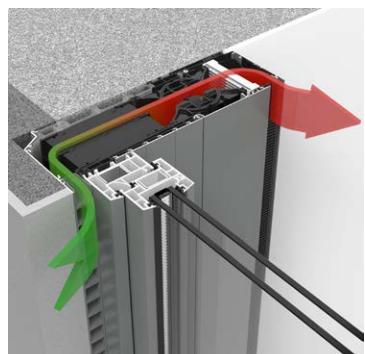

Air supply downwards + plastered

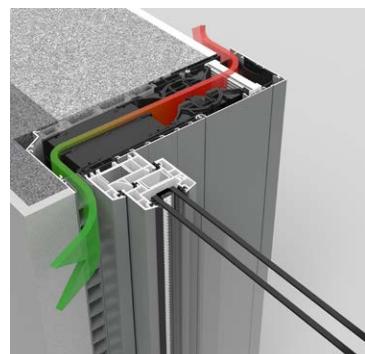

Air supply upwards

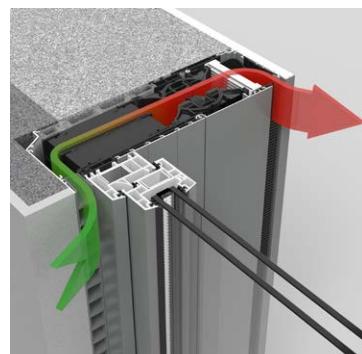

VERTICAL

Air supply towards the window

Air supply towards the wall

Air supply towards the window + plastered

CONTROL OPTIONS

- TouchDisplay with indication of indoor air quality and ventilation level
 - Integrated air quality sensor
 - Indication of active programm
 - 230V voltage
 - Wireless communication with ventilation module
 - Up to 5 Endura Twists can be controlled by 1 TouchDisplay
 - Filter warning + error log
- Button control
 - Power supply: button cell battery
 - Wireless communication
 - Only 1 Endura Twist can be controlled by 1 button control
 - Filter warning + error log
- Building Management System [BMS]
- Can be put on a circuit with a bathroom fan.

The Endura Twist will temporarily only supply air, until the bathroom fan is turned off.

TouchDisplay

Button control

	TOUCHDISPLAY	BUTTON CONTROL	BMS
Automatic mode	●	—	●
Silent mode	●	●	●
Natural mode	●	●	●
Closed mode	●	●	●
Boost	●	●	●
Timers	●	—	to be implemented by oneself
Manual mode	●	●	●
Continuously alternating	—	—	●
Continuously not alternating	—	—	●
All-in	● *	● *	●
All-out	—	—	●
Demand control [CO ₂]	●	—	to be implemented by oneself

* If a relay-circuit is provided between the Endura Twist and the bathroom fan.

Endura Twist is always controlled by a TouchDisplay OR button control OR BMS, NEVER by several control options at the same time.

FUNCTIONALITIES

- Operation:
 - Automatic [only with TouchDisplay and BMS]
 - Programmed according to time schedule with chosen level
 - Silent mode-function [device operates more quietly]:
 - Very limited sound generation
 - Limited air flow capacity
 - Timers
 - Demand controlled ventilation thanks to integrated CO₂-sensor [only TouchDisplay]
 - Boost function
 - Temporary maximal ventilation
 - Duration can be set with timer
 - Natural ventilation-function:
 - Natural instead of mechanical supply and extraction, the fans stop operating.
- Closed mode:
 - Manually in case of emergency [e.g. heavily polluted air] allows you to close the fans completely. There won't be any ventilation.
 - Automatically through facade pressure compensation > 40Pa [after 30 min. the program will return to its normal program, if allowed by the weather conditions].
 - Automatically if temperature of the incoming air is too low (<5°C after warmth recuperation)
 - Guaranteed comfort
 - Device closes for 3 hours
 - Manual mode [via optional Touch Display or button control]
 - Continuous ventilation on the same level
- Filter warning on control [only with optional Touch Display or button control] and device
- Dynamic facade pressure compensation
 - Activation through severe winds and large facade pressure difference.
 - Guaranteed comfort inside [no risk to over-ventilate]
